## United States Senate

WASHINGTON, DC 20510-1804

April 26, 1999

Jane E. Henney, Commissioner  
U.S. Food and Drug Administration  
5600 Fisher's Lane  
Rockville, MD 20857

Dear Commissioner Henney:

Congress, the Food and Drug Administration (FDA), the Interstate Shellfish Sanitation Conference (ISSC), and the shellfish industry continue to recognize the risks associated with *Vibrio vulnificus* to certain high risk individuals when they consume raw molluscan shellfish. The recent petition submitted to the FDA by the Center for Science in the Public Interest appears to be trying to circumvent the established process for dealing with molluscan shellfish in this country. We hope that your agency will steer this effort back into the appropriate forum.

The ISSC has made commendable efforts over the last few years to address this issue in a fair and practical process. The adoption of the Interim Control Plan, and subsequent actions by industry to meet the guidelines of the Plan, has improved the National Shellfish Sanitation Program in a practical way. The industry in the Gulf has been willing to change its handling practices to improve the quality and wholesomeness of oyster products.

We encourage efforts to get industry to reduce oyster related illnesses by developing additional methods to improve the quality of shellfish. However, restrictive control measures for added consumer protection not based on scientific research may cause undue harm to the shellfish industry, especially in the Gulf of Mexico. In addition, such efforts are contrary to the reasonable approach the Conference has taken thus far.

We want to reiterate our support for a balanced and practical program based on consumer education and information that is supported by scientific research. Moreover, we continue to support funding for educational programs that address *vibrio vulnificus*. We also want to encourage the ISSC to continue its efforts in this arena while researchers continue to develop additional practical strategies. Again, we firmly agree that any future ISSC policies should be based on risk assessments utilizing accurate scientific data.

As such, we will continue our support of educational responses to *vibrio vulnificus* through federally funded programs. We also support the continuation of industry expenditures to further educational efforts. We would appreciate the FDA working with us through the ISSC process in establishing guidelines and priorities for these educational programs.
